region, connecting multiple Internet Service Providers (ISPs), content delivery networks (CDNs), and cloud operators. Yotta has got an anchor customer (herein after referred as "The Customer") in 6 cities in India who plans to launch its satellite broadband services in India, in the line of SpaceX, and it requires around 1 acre of land in multiple cities with basic infrastructure like power and fiber connectivity for setting up its satellite receiving station. This falls in line with Yotta's Edge strategy in multiple Tier II cities.

Yotta has gone ahead and identified 6 locations in India, in concurrence with the customer and in all of these locations will give half of the land to customer on a service agreement. The balance half (1 to 1.5 acres) of the overall land parcel will be utilized by Yotta for its Edge data centre in these cities in a phase wise manner at a later date. Technically also, these land parcels will be ideal for an edge data centre considering the dense network infrastructure these sites will possess once the satellite bandwidth infra is installed by the Customer and all the local telco companies bring their terrestrial network to connect to it.
